

Toni Kristian Storhannus

Looking for a new opportunities, entry level engineer, helpdesk, technical support, automation, Robotics

toni.storhannus@gmail.com

Summary

Software engineer from Helsinki, Finland with wide range of experience from different fields of engineering.

As stated in the title of my LinkedIn-profile I am looking for opportunities to work as technical support or a service desk engineer. I have background in software-, automation-, electronics- and robotics industries. I am motivated and a social and service oriented professional with experience in project management, field engineering and service desk operations. After the last fixed term contract with my previous employer, I started to set up entrepreneurship providing wide range of services for regular households. In the current economic depression this has proven to be very challenging and now I have decided put this project aside and find new challenges elsewhere. I enjoy working with people and being socially skilled individual, I like facing customers and end-users on daily basis. I would like find myself in a position of being member of a team of skilled professionals sharing the same goal. This will really drive my philosophic-technical -mind towards good results and customer satisfaction. contact:toni.storhannus(at)gmail.com

Experience

carpet Installer at Tuusulan Mattotyö Oy

January 2014 - Present (2 years 3 months)

Customer Service

Toni Kristian Storhannus

Looking for a new opportunities, entry level engineer, helpdesk, technical support, automation, Robotics

toni.storhannus@gmail.com

1 person has recommended Toni Kristian

"I've known Toni for a long time and know him very well. We studied many years together in Helsinki Polytechnic University. After graduation, we have done many voluntary projects of experimenting with new technology together. Toni is always interested in learning new and he is very good at inventing creative solutions to technical problems. He has great attention to detail and he always wants his outcomes to be as polished as possible. In addition, to his technological skills, he has very good social skills and is a remarkably good listener. He really cares about people and he takes everyone very seriously when it comes to issues where he is able to help. This ability would make him a very good candidate when people skills and/or being in contact with customers is needed. I would recommend him any day."

— **Harri Savolainen**, studied with Toni Kristian at Polytechnic University of applied sciences of Helsinki
